

# Debugging von Formatbäumen in der DMEE

Beitrag von „Claus Wild“ vom 16. Juli 2022, 07:10

Mit Hilfe der Transaktion DMEE1\_DEBUG können in dem Formatbaum Breakpoints für das Debugging eingesetzt werden:

The screenshot displays the user interface for the DMEE1\_DEBUG transaction. It features two input fields at the top: 'Baumtyp:' with a small search icon to its right, and 'Formatbaum:' with a larger empty text box below it. Below these fields is a row of three buttons: 'Anzeigen' (with a magnifying glass icon), 'Ändern' (with a pencil icon), and 'Anlegen' (with a document icon). At the bottom of the interface, there are two more buttons stacked vertically: 'Eigene DMEE-Breakpoints löschen' and 'Alle DMEE-Breakpoints löschen'.
